

*Superior replacement filter
elements for your DFO system*

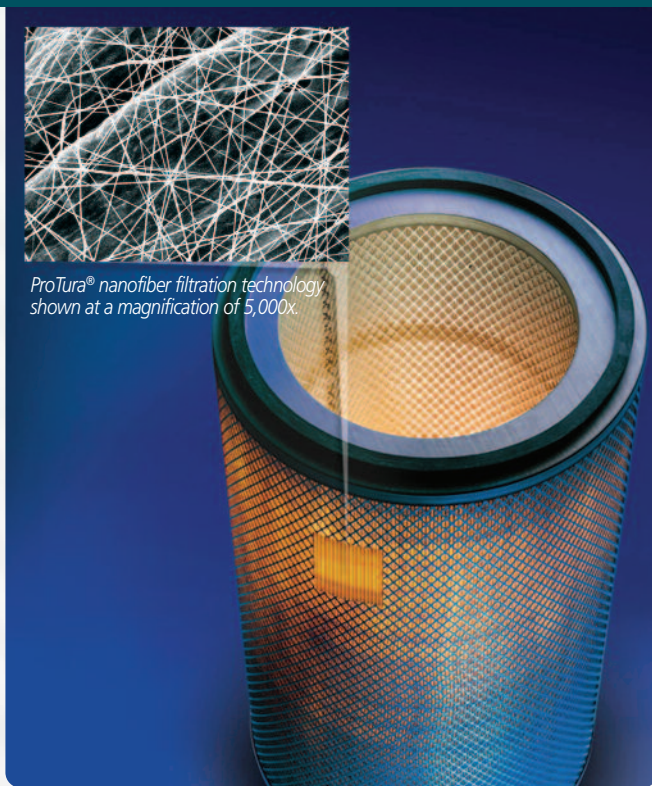

New Oval Replacements Feature Advanced Nanofiber Filtration Technology

Now you can replace the filter elements in your Donaldson® Downflo® Oval dust collector with Clark Filter performance and value.

Clark Filter proudly introduces ProTura® Oval replacement filters. Our elements feature nanofibers that are 50% finer than OEM and a MERV 15 efficiency rating, the industry's highest.

ProTura technology in your dust collectors means superior filtration efficiency on sub-micron particulate (0.3 to 1.0 micron dust particles), lower emissions, longer filter service life and greater energy savings. For specifications on the new ProTura Oval replacement filters, contact Clark Filter at **(800) 327-2247**.

ProTura® nanofiber technology will outperform your current system cartridges

New ProTura® Oval replacement filters put Clark nanofiber filtration to work in your Donaldson® Downflo® Oval dust collector. They feature:

- **Industry's smallest fibers** — superior filtration efficiency on sub-micron particulate (MERV 15) reduces emissions for cleaner air and a healthier work environment
- **Surface-loading performance** — particulate pulses off the surface layer while the media remains clean
- **Lower initial pressure drop over the life of the filter** — and less overall system energy cost
- **Unmatched release properties** — fewer pulses and less compressed-air use reduce cleaning cycles and extend filter life
- **No messy pre-coating materials required**
